Dr. Hafizur Rahman

INTRODUCTION

1

- A job portal is a web-based application that connects job seekers (students) with employers in a centralized platform.
- It enables students to create profiles, upload resumes, and search for jobs based on skills, location, and experience.
- Employers can post job openings, manage job listings, and efficiently recruit suitable candidates.
- The system provides an organized way to apply for jobs and track application status (Applied, Shortlisted, Rejected).
- It includes secure user authentication and role-based access for students, employers, and administrators.
- The portal sends email notifications to users when they apply for jobs and when their application status is updated.
- The application is developed using technologies like HTML, CSS, JavaScript, Spring Boot (or PHP), and MySQL database.
- Overall, the system improves communication, reduces manual effort, and makes the hiring process faster and more efficient

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

The traditional job search and recruitment process is often **manual, time-consuming**, and unorganized. Students find it difficult to search for suitable jobs from multiple sources, while employers struggle to manage large numbers of applications efficiently. There is no centralized platform to track job applications and their status. This leads **to delays, confusion, and missed opportunities** for both job seekers and recruiters. Communication between students and employers is also limited and inefficient. Therefore, there is a need for a **simple, centralized, and automated** job portal system. This system will streamline job **posting, searching, and application tracking**. It will improve efficiency, accuracy, and accessibility for all users.

OBJECTIVE(S)

The picture can't be displayed.

1

2

3

- To develop a **web-based job portal** that connects students and employers on a single platform.

4

- To enable **easy job posting, searching, and online application** for efficient recruitment.

5

6

- To provide **application tracking and email notifications**, improving communication and transparency.

7

8

9

PROPOSED SYSTEM

1

- The proposed system is a **web-based job portal** that connects students and employers through a single, centralized platform.

2

- It provides **secure registration and login** with role-based access for students, employers, and administrators.

3

- Employers can **post, update, and manage job listings**, reducing dependency on manual recruitment processes.

4

- Students can **search, filter, and apply for jobs online**, saving time and effort compared to traditional methods.

5

- The system includes **application status tracking**, allowing users to monitor progress (Applied, Shortlisted, Rejected).

6

- It solves existing issues by **eliminating scattered job information**, improving organization, and reducing delays in communication.

7

- **Email notifications** keep users updated about job applications and status changes, ensuring timely communication.

8

9

- Compared to current systems, it offers **faster processing, better accessibility, improved accuracy, and enhanced user experience.**

PROPOSED SYSTEM ARCHITECTURE

TECHNOLOGIES USED

The picture can't be displayed.

1

Frontend:

- HTML5
- CSS3

2

Backend:

- PHP (Core PHP)
- Session Management
- MySQL(Database Connectivity)

3

4

Database:

- MySQL
- phpMyAdmin

5

6

Tools:

- XAMPP (Apache + MySQL Server)
- Notepad
- Web Browser (Chrome)

8

9

Hardware / Software Requirements:

- **System:** Windows 10
- **RAM:** Minimum 4GB
- **Software:** XAMPP Server

MODULE DESCRIPTION

1

Module 1: User Management

Handles student and employer registration, login, and profile management with secure authentication.

2

3

Module 2: Job Management

Allows employers to post, edit, and delete job listings, and enables students to view available jobs.

4

5

Module 3: Application Processing

Manages job applications, allowing students to apply and employers to shortlist or reject candidates.

6

7

Module 4: Database Management

Stores user details, job information, and application records while ensuring data integrity and retrieval.

8

9

Module 5: Dashboard & Reporting

Displays dashboards for students and employers, showing job activities, application status, and basic insights.

IMPLEMENTATION SCREENSHOTS

9

Profile Page

Displays user details like name, email, and role.

Allows users to view their personal information.

Can be extended to update profile and upload resume

ADVANTAGES & LIMITATIONS

ADVANTAGES

Provides a centralized platform for job seekers and employers.

Saves time and effort in job searching and recruitment.

Allows easy job application and status tracking.

Improves communication between students and employers.

Accessible anytime through the web application.

LIMITATIONS

Requires stable internet connection.

Limited advanced features like AI-based job matching.

Security needs improvement for real-world usage.

Not suitable for handling very large-scale users.

No real-time notifications in the current system.
